

ABSTRACT OF THE DISCLOSURE

2 A tool suspension device includes a main body having a first side
3 formed with a mounting hole and a second side provided with a mounting
4 portion. The mounting hole of the main body has a periphery formed with a
5 catch edge. The mounting portion of the main body has an inside formed with a
6 mounting space communicating with the mounting hole. Thus, the ratchet
7 wrench can be mounted on and detached from the tool suspension device
8 easily and conveniently, thereby facilitating the user using the ratchet wrench.
9 In addition, the tool suspension device can be reused repeatedly.
